

# SLIDE GUIDE

GL TYPE

The NB slide guide GL type realized low noise with a ball cushion embedded between the steel balls and significantly extended lubricant replenishment intervals by the use of fiber sheet. In addition, its compact size as well as high load capacity allows for the size and weight of machinery and other equipment to be reduced.

## STRUCTURE AND ADVANTAGES

The GL type slide guide consists of a rail with 4 rows of precisely machined raceway groove and a block assembly consisting of the main body, steel balls, ball cushions, a retainer, a fiber sheet, and return caps.

### Low Noise:

By incorporating a ball cushion between steel balls, the metal contact between the steel balls is prevented, which allows for a reduction in noise levels. (See the noise data in Fig. A-44, page A-53.)

### Can Significantly Extend Lubricant Replenishment Intervals:

A lubricant-containing fiber sheet incorporated in the block supplies appropriate amount of lubricant to the raceway grooves at appropriate intervals, which can significantly extend the lubricant replenishment interval.

### High Load Capacity and Long Life:

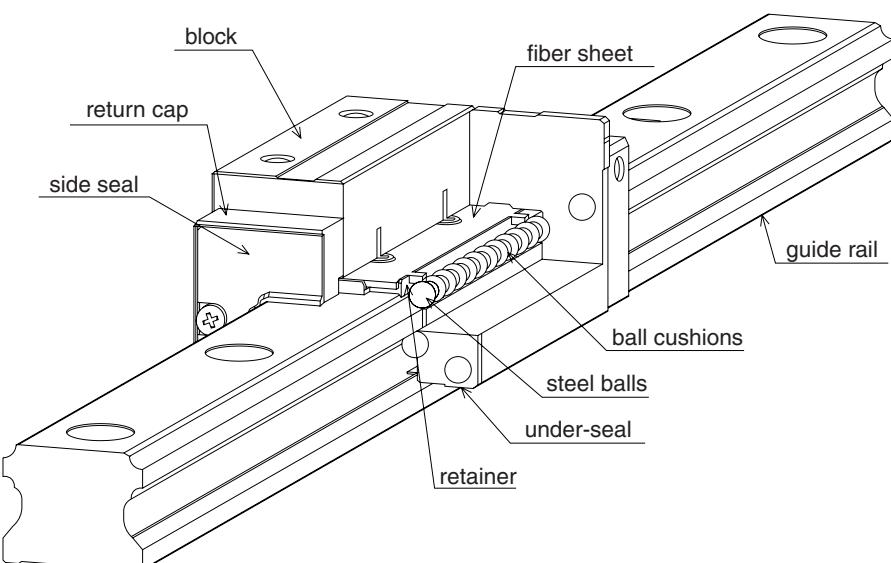

With large-diameter steel balls employed, this slide guide has a higher load rating and a longer life compared to low-noise guides offered by other companies.

(See the load rating comparison data in Fig. A-44, page A-53.)

### Omni-Directional Load Capacity:

The steel balls are positioned at 45° contact angle so that the load capacity is equal in four directions (above, underneath, right and left).

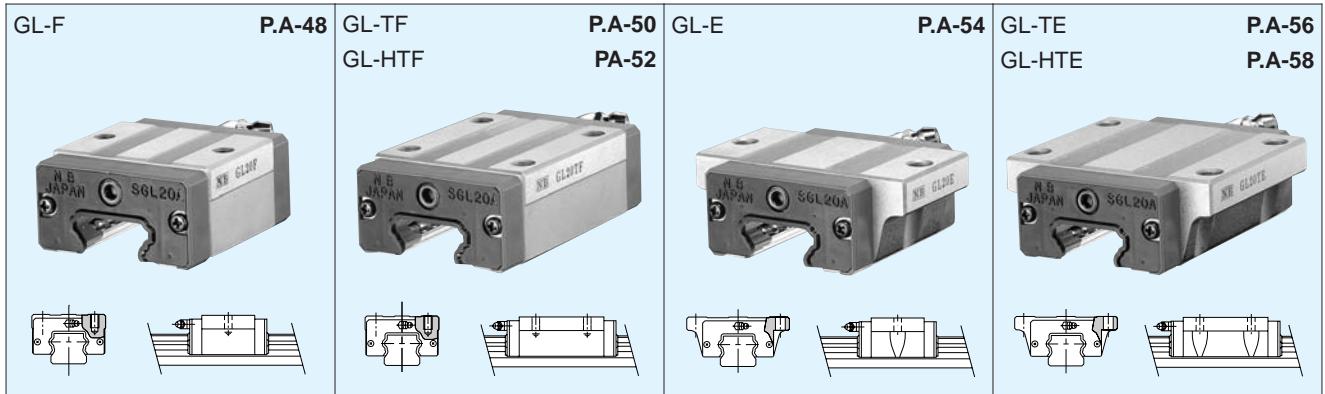

Figure A-50 Structure of GL type Slide Guide

## SLIDE GUIDE

## BLOCK TYPES

Six different types of blocks are available depending on the mounting space and desired mounting method.

## ACCURACY

Three accuracy grades are available: normal-grade (no suffix), high-grade (H), and precision-grade (P).

Table A-22 Accuracy

unit/mm

part number	GL15,20			GL25,30,35			GL45		
accuracy grade	normal	high	precision	normal	high	precision	normal	high	precision
accuracy symbol	none	H	P	none	H	P	none	H	P
allowable dimensional tolerance for height H	$\pm 0.1$	$\pm 0.03$	$-0.03\sim 0$	$\pm 0.1$	$\pm 0.04$	$-0.04\sim 0$	$\pm 0.1$	$\pm 0.05$	$-0.05\sim 0$
paired difference for height H	0.02	0.01	0.006	0.02	0.015	0.007	0.03	0.015	0.007
allowable dimensional tolerance for width W	$\pm 0.1$	$\pm 0.03$	$-0.03\sim 0$	$\pm 0.1$	$\pm 0.04$	$-0.04\sim 0$	$\pm 0.1$	$\pm 0.05$	$-0.05\sim 0$
paired difference for width W	0.02	0.01	0.006	0.03	0.015	0.007	0.03	0.02	0.01
Running parallelism of surface C to surface A	refer to Figure A-51								
Running parallelism of surface D to surface B									

Figure A-51 Motion Accuracy

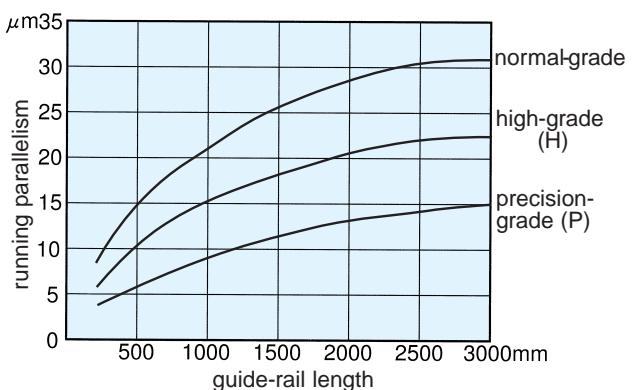

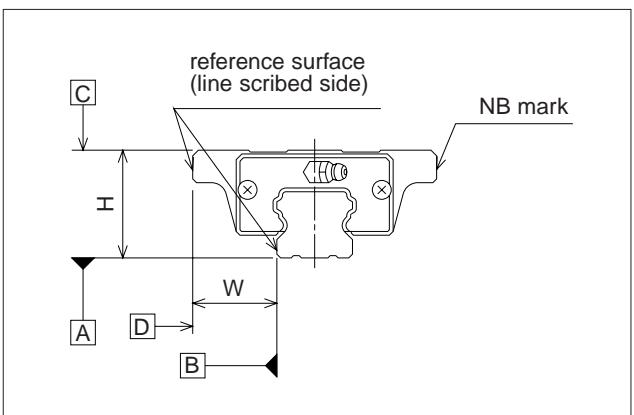

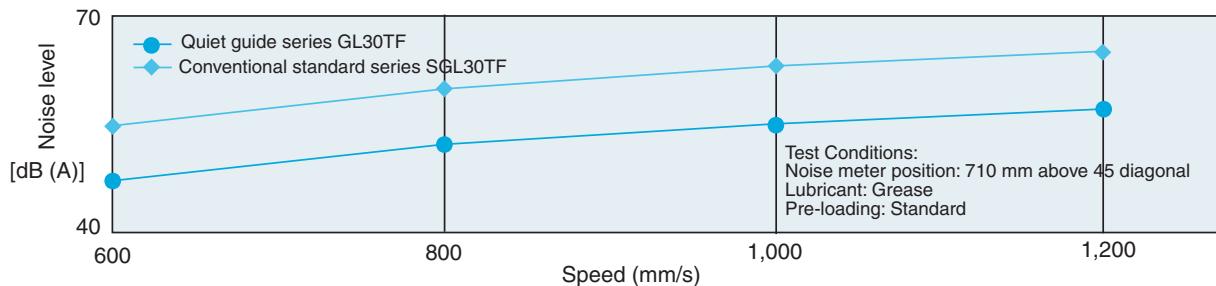

Figure A-52 Accuracy

## Low Noise

Ball cushions are inserted between the steel balls preventing metal contact and enabling low noise.

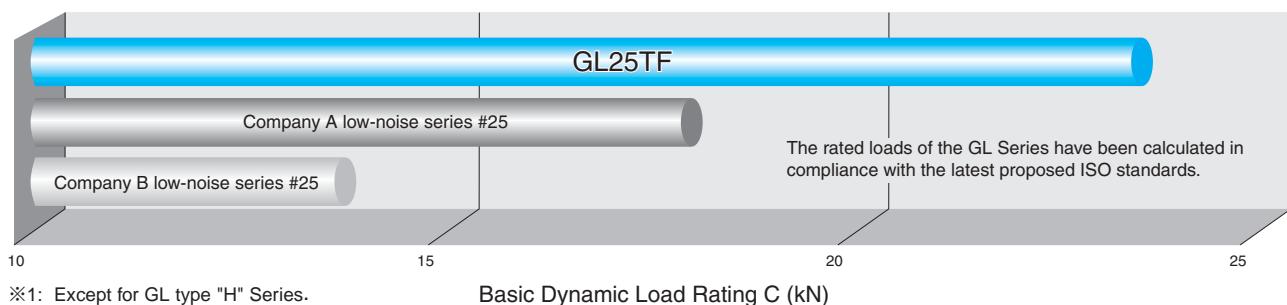

Figure A-53 Noise Data

## High load capacity / long life

The GL type slide guide has a rated load of 1.2 to 1.6 times greater than the load of other companies "low-noise" type guides. This high load capacity enables a longer service life.

Figure A-54 Rated load comparison data

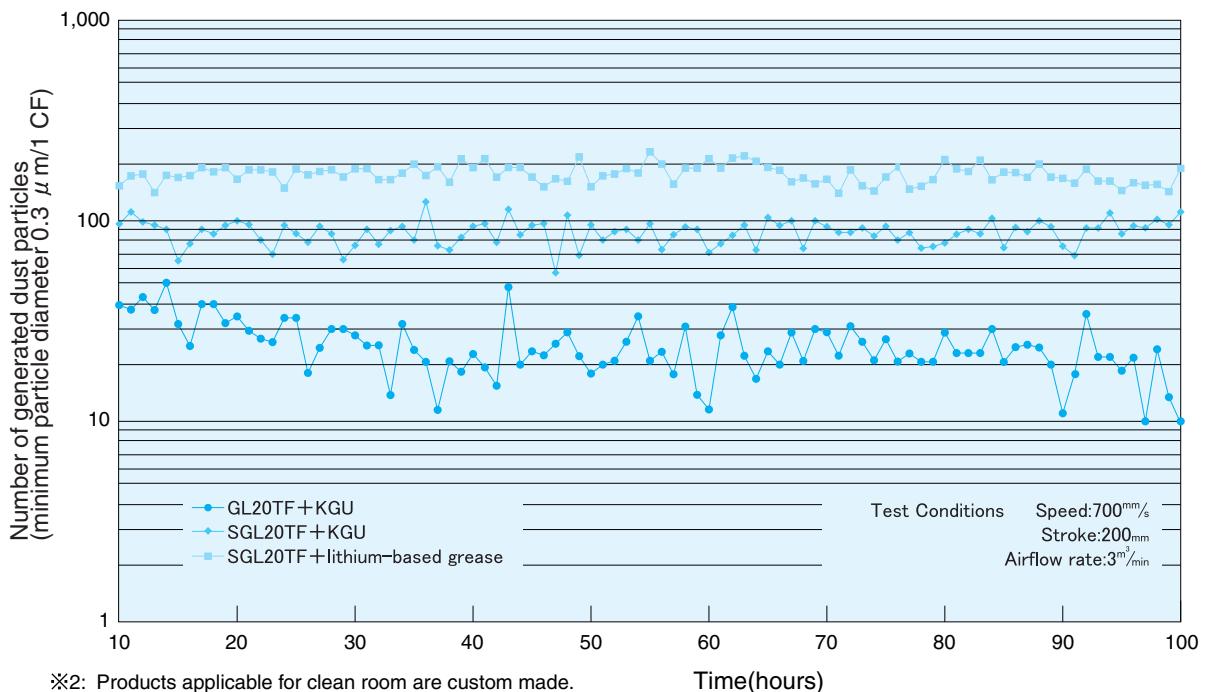

※1: Except for GL type "H" Series.

## Clean Operation

Ball cushions eliminate metal contact between the steel balls and prevent excess grease spatter, enabling linear operation with low levels of dust generation.

Figure A-55 Dust generation data

## PRE-LOAD

GL type slide guides are available with a standard pre-load (no suffix), light pre-load (T1), and medium pre-load (T2).

Table A-23 Pre-load Symbol and Radial Clearance unit/ $\mu\text{m}$

pre-load category	standard	light	medium
pre-load symbol	none	T1	T2
GL15	- 4~+2	-12~- 4	-
GL20	- 5~+2	-14~- 5	-23~-14
GL25	- 6~+3	-16~- 6	-26~-16
GL30	- 7~+4	-19~- 7	-31~-19
GL35	- 8~+4	-22~- 8	-35~-22
GL45	-10~+5	-25~-10	-40~-25

Table A-24 Operating Condition and Pre-Load

category	symbol	operating condition
standard	none	Minute vibration is applied. Precision motion is required. Moment in a given direction is applied.
light	T1	Light vibration is applied. Light combined load is applied. Moment is applied.
medium	T2	Shock/vibration is applied. Over-hang load is applied. Combined load is applied.

## RAIL LENGTH

Slide guides with most commonly used lengths are available as standard. Unless otherwise specified, the distance to the first mounting hole (N) from one end of the rail will be located within the range listed in Table A-25 for slide guides that have a non-standard length satisfying the following equation.

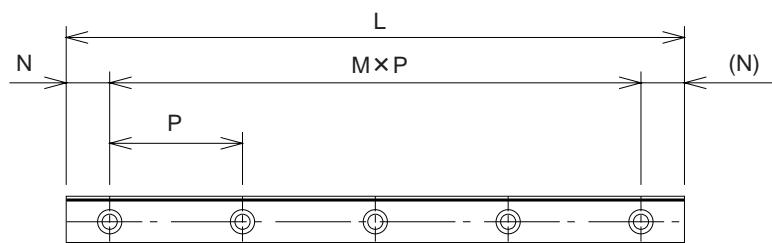

$$L = M \cdot P + 2N$$

L : length (mm) N : distance to the first hole from the end of the rail (mm)  
M : number of pitches P : hole pitch (mm)

Table A-25 Fabrication Range

part number	N		Lmax
	and over	less than	
GL15	6	36	2,000
GL20	10	40	
GL25	11	41	
GL30	12	52	
GL35	16	56	
GL45	20	60	

Figure A-57 Rail

## SLIDE GUIDE

## MOUNTING

As shown in Figure A-58, the standard method of slide guide mounting is to bring the reference surface of the rail and/or block into contact with the shoulder on the mounting surface. The shape of the shoulder should be finished to no more than the value shown in Table A-27, to prevent interfere with the corner of the rail or block.

Use a torque wrench to attach the rail with the set torque, to ensure the precision performances. The recommended torque values are shown in Table A-26. Adjust the torque value as needed according to the operating conditions.

Table A-26 Recommended Torque unit/N·m

bolt size	M3	M4	M5	M6	M8	M12
recommended torque	1.4	3.2	6.6	11.2	27.6	96.4

(When using alloy steel bolts)

SGL25	5	5.5	1
SGL30	6	7.5	1
SGL35	6	8	1
SGL45	8	8	1

## GREASE FITTING

A grease fitting is attached to the GL slide guide in the return cap for lubrication purposes. Unless otherwise specified, the orientation of the grease fitting is as shown in Figure A-59. When more than two blocks are used on one rail, the grease fitting orientation must be specified.

Figure A-59 Number of Blocks and Grease Fitting Orientation
